corefy

Batch payouts

A comprehensive all-in-one solution that enables you to make mass payouts to thousands of recipients using multiple methods and currencies simultaneously.

Workload optimisation

Complete batch payouts as easy as clicking a mouse, saving time and capabilities for other business tasks.

Spreadsheet-like execution

Creating a batch payout file is a no-brainer. Just list the items in any spreadsheet you're used to and save it as .csv or .xls.

Unlimited capabilities

Use multiple payout methods to send any amount in any currency, relying on hundreds of ready-made connections with payment providers.

How does it work?

1 **Create** a batch payout file with an array of items.

2 **Upload** your batch payout file to our platform.

3 **Process** an unlimited number of individual payouts at once.

4 **Download** a detailed report after completion of your request.

What makes this payout solution stand out?

Make mass payouts at any scale by leveraging as many payment methods and currencies as needed. You can use multiple payout methods and flows simultaneously: mix SEPA and SWIFT transfers, or send money to PayPal wallets by ID and by phone number.

If you have to deal with large amounts, you'll benefit from splitting, an option to execute any item in the batch payout through multiple transactions.

Besides, there are two processing options: sequence and parallel. The first means batch payout items will be processed consecutively, and the second executes all payouts at once. You can configure the system to reroute transactions until they are successfully

completed or suspended, and manage failover by setting up attempt limits and routing rules for any resolution. If that sounds good but challenging, don't worry — our payment experts are ready to help.

How does it help to manage the payout process?

✅ We automatically settle all your payment data into a single in-depth report. Handle exceptions instead of manual **reconciliation** of each transaction.

✅ **Monitor** the batch payout performance in real time and generate any of our out-of-the-box **reports** in a few clicks or automatically on a regular basis.

✅ All transactional data about payouts can be **exported** in .csv or .xls format.

✅ Set and configure **Alerts** to be timely notified of reaching crucial figures or some error and malfunction occurring.

Is this solution tailored to my industry?

Batch payouts by Corefy is a multi-purpose solution, that you can use to make regular payouts, pay out salaries, bonuses, winnings, rewards, make refunds, and mass payouts to vendors or partners. Here's a list of industries and business activity areas which already use it:

Gaming & Betting   Marketplaces   Affiliate networks   HR management   Manual refunds
