

Checkout

A universal ready-made solution for accepting online payments, designed with the consumer in mind. It drives your sales and lets you receive payments securely at lightning speed.

Versatility

Boost your conversion with an ultimately responsive Checkout supporting any payment method and flow. Process payments, donations, or subscription requests.

Localisation

Go global and scale up with minimal effort. Checkout can identify and adapt to the geolocation of a user, switching to the right language, currency, and displaying local payment methods first.

Customisation

Adjust the Checkout design to the look and feel of your website. Use a custom theme and configure fields to make it unique.

Personalisation

Checkout memorises users' info and their latest or most used methods, displaying a selection of options recommended personally for them.

How does it work?

- ✓ **Integrate** advanced Checkout without writing a single line of code.
- ✓ **Customise** its look and feel to offer your customers a seamless brand experience.
- ✓ **Accept** one-time or recurring payments in a split second and take the hassle out of it.

How does it help me maximise conversion?

Checkout supports almost every payment method imaginable right out of the box. Besides, it comes hand in hand with a powerful tech toolkit, allowing you to:

- ✓ Route each transaction according to selected parameters, saving time and cutting costs.
- ✓ Eliminate declines by using automatic rerouting of a transaction until full completion.
- ✓ Combat fraud and decrease the chargeback ratio by relying on our anti-fraud engine and security tools.
- ✓ Enable one-click payments to reduce friction and refine the customer experience.

- ✓ Stop losing sales with manual retries and enable auto-retries to handle failover management.
- ✓ Show your appreciation to returning customers by eliminating the need for repeated payment data entry. Empower them to manage saved cards and payment methods.
- ✓ Configure your Checkout and perform experiments in the test environment to optimise business performance and discover what works best for you and your clients.

How to integrate it?

In a rapidly changing world of payments, integration should be a piece of cake. This is what it's like with our Checkout. Save time, costs and development efforts by choosing the integration option that fulfils your needs, opportunities and expectations.

Flash - Practically no coding effort is needed to have Checkout live as a popup on top of your website, without redirecting.

Embedded - Easily integrate Checkout into your website as an IFrame, creating a frictionless user experience.

Pay by link - Generate payment links and send them to your customers to complete purchases.

Self-hosted - If you have your own development team and are PCI DSS certified, consider hosting Checkout yourself using API and SDKs.

How to get started?

See how it works and ask any questions you might have on an online demo.
