Currency conversion

A toolset for handling payments in various currencies and cryptocurrencies with the support for dynamic currency conversion, multicurrency balances, numerous exchange rates sources, and configurable fees.

For business:

- Generate additional revenue from conversion fees
- Reduce the risk of currency fluctuations
- Offset the fees for accepting foreign credit cards
- Increase customer satisfaction and loyalty
- Attract new customers and win business over competitors

For customers:

- Pay in the currency of your choice without hidden charges
- See the current exchange rates
- Get detailed information on each transaction
- Make informed and confident purchasing decisions

How does it work?

Enable your international customers to view prices and pay online in their preferred currency and settle your balance in the currency of your choice. The exchange rates feature allows you to send payments and make refunds in another currency even if you don't maintain a balance in that currency.

200+ cryptocurrencies

160+ world currencies

1000+ supported currency pairs

20+ exchange rates data sources

What is dynamic currency conversion?

Dynamic currency conversion (DCC) converts purchases to the buyer's home currency at the time of the sale.

✓ Historical rates data

- ✓ Rate correction multiplier and fixed fee
- ✓ Auto-update from FX rates data source
- ✓ Predefined default rate scheme

Unlimited rate schemes

How does DCC help to improve cost efficiency and the UX?

The dynamic currency conversion feature locks in the exchange rate at the POS at the moment of purchase. Opting for a transaction with the DCC, you can see the price, including the current market rate and a service provider's fee. Your customers will know exactly how much they spend in their home currency, so there are no surprises when their statement arrives.

The DCC allows currency conversion to happen in real-time, so you see the rates applied to your transaction immediately.

The DCC feature simplifies comparison shopping, as most customers prefer to view prices in their own currency.

How to get started?

See how it works and ask any questions you might have on an online demo.
