

Merchant management

Ready-to-use software with an intuitive dashboard that helps merchants to control financial flows at several points of sale at a single point.

Reduce manual work, managing all daily operations in a single convenient dashboard

Get insightful reports with the data and metrics that are essential for you

Segment information by entities, enabling each of them to operate with its unique workflow

Maintain security of data with reliable access management

Increase business efficiency by eliminating manual work and monitoring trends in customers' behaviour

Aggregate all data to get accurate reports and forecasts for further analysis of business performance

How does it work?

The payment management system helps businesses with several storefronts to manage their financial flows in a single access point. Providing analytics on money movement across several accounts, the system displays the data about the processed transactions per day and allows for setting alerts on essential incidents.

Get a **reliable partner** to manage all payments, make payouts, access customer data, and get business performance insights.

Streamline your financial accounting

Compare different periods and analyse your business performance. This tool for merchant management allows you to monitor the conversion rates of different periods to understand the overall efficiency and throughput of payments.

- ✓ **Virtual balances** in different currencies allow you to accept payments in any currency and settle them in that of your merchant account
- ✓ Choose the **specific exchange rates** for each currency to increase cost-efficiency
- ✓ **Manage the fees** on payments, generating your interest to increase the profit
- ✓ **Control the turnover and overdraft limits**, rolling reserve and much more with the help of a feature-rich set of tools

Insightful reports for better decision-making

The merchant management tool lets you create and download extensive reports, choosing from 25+ predefined ones or customising them to your business needs. You can select the time to receive a report, select the rows with the necessary data, and set alerts to get notified on vital points and divergencies.

How to get started?
