How to make payouts with Corefy?

We provide you with out-of-the-box access to any payout tool you might think of to make both manual and automated payouts. You can create payout invoices to initiate transactions manually, initiate payouts buy a token, upload a batch file to pay out to an unlimited amount of recipients simultaneously and regardless of the payout method, and even split a single large payout into multiple transactions.

What makes this payout solution stand out?

Uncover the benefits of smart processing features to streamline your payout processes:

✔ Set up optimal **routing** schemes to automatically forward each transaction to the most efficient route.

✔ Use **cascading** to reroute each transaction until successful completion, minimising declines and achieving independence from technical issues on PSP's side.

✔ Easily handle bulk payouts with **splitting**, completing them through multiple providers and methods.

✔ With seamless **currency conversion**, customers can receive payouts in preferred currencies, while you settle your balance in the currency of your choice.
